

CS 377

Homework 5

Due: November 20, 2007

For this assignment, you are required to

1. Provide the object oriented design of the *MyBank* system described in Homework #3. You may use your architectural decomposition to help you in this endeavor. You are expected to use UML to represent your design.
2. Make sure to clearly demonstrate the use of at least two design patterns in your design. Discuss their benefits specific to *MyBank*'s design.
3. Identify three sequence diagrams in the system:
 - (a) opening an account;
 - (b) depositing money in a branch;
 - (c) withdrawing money from an ATM.
